

ECON 1550: International Finance

National Income Accounting for
Open Economies

Announcements

- Problem Set 1 due today before midnight
- Solutions and Problem Set 2 posted right after
- Read pages 58–67 of textbook before ~~Wednesday~~ ^{FRIDAY} lecture
- Fill in survey for office hours and section (right now!)

Office Hours and Section Availability

Please fill in your availability:

<https://www.when2meet.com/?34820140-APJfJ>

Agenda

- Balance of payments account
- Exchange rate determination with asset approach

Macro Review: GDP

Gross Domestic Product (GDP) measures the total value of:

- **Production:** All final goods and services produced within a country
- **Income:** All income earned from production within a country
- **Value added:** Sum of value added at each stage of production

All three approaches yield the same number.

Closed Economy

$$Y = C + I + G$$

- All output is either consumed, invested, or purchased by government
- No trade with the rest of the world

Open Economy with GDP

$$GDP = C + I + G + \underbrace{EX - IM}_{NX}$$

- EX = Exports (domestic goods sold abroad)
- IM = Imports (foreign goods purchased domestically)
- NX = Net exports (trade balance)

GDP and GNP

- **GDP:** Value of production *within a country's borders*
 - Regardless of who owns the factors of production
- **GNP:** Value of production by *a country's residents*
 - Regardless of where production takes place
- **Relationship:**

$$\text{GNP} = \text{GDP} + \text{Net Income from Abroad}$$

Open Economy with GNP

$$GNP = C + I + G + CA$$

- CA = Current account
- $CA = NX +$ Net income from abroad

GDP and GNP

Net Income = wages from Prof. Duarte teaching in France — profits and wages from firm operating inside US

United States GNP = United States GDP + Net Income

National Saving: Closed Economy

National saving = output not used for consumption or government spending

$$\begin{aligned} S &\equiv Y - C - G \\ &= (C + I + G) - C - G \\ &= I \end{aligned}$$

In a closed economy: $S = I$

National Saving: Open Economy

Starting from $Y = C + I + G + NX$:

$$S \equiv Y - C - G$$

$$= I + NX$$

In an open economy: $S = I + NX$

National Saving: Open Economy

Rearranging: $S - I = NX$

- If $S > I$: Trade surplus, country is a net lender
- If $S < I$: Trade deficit, country is a net borrower

Private Saving

Private saving = disposable income that is saved, not consumed

$$S^p \equiv Y - T - C$$

Public (Government) Saving

Government saving = tax revenue minus government spending

$$S^g \equiv T - G$$

- If $T > G$: Budget surplus ($S^g > 0$)
- If $T < G$: Budget deficit ($S^g < 0$)

Total Saving

Total national saving:

$$\begin{aligned} S &= S^p + S^g \\ &= (Y - T - C) + (T - G) \\ &= Y - C - G \end{aligned}$$

Using $S = I + NX$ from before, we get:

$$S^p + S^g = I + NX$$

Balance of Payments

Current Account	−200
Capital Account	−1
Financial Account	−201

→ $CA = NX + NI$

↪ NON-MARKET TRANSACTIONS

→ FINANCIAL
FLOWS

$$\begin{array}{rclcl} \text{Current} & & \text{Capital} & & \text{Financial} \\ \text{Account} & + & \text{Account} & = & \text{Account} \\ (-200) & + & (-1) & = & -201 \end{array}$$

Balance of Payments

Current Account	-200	} -201
Capital Account	-1	
Financial Account	-201	} -201
Statistical discrepancy	<u>0</u>	← "MEASUREMENT Error"

$$\begin{array}{rclcl}
 \text{Statistical} & = & \text{Financial} & - & \left(\begin{array}{cc} \text{Current} & \text{Capital} \\ \text{Discrepancy} & \text{Account} & + & \text{Account} \end{array} \right) \\
 \underline{0} & = & -201 & - & [(-200) + (-1)]
 \end{array}$$

U.S. Balance of Payments Accounts for 2025-Q3 (\$ bn)

Current Account	−226
-----------------	------

Capital Account	−1
-----------------	----

Financial Account	−410
-------------------	------

Statistical discrepancy	−183
-------------------------	------

$$\begin{array}{rclcl} \text{Statistical} & & \text{Financial} & & \\ \text{Discrepancy} & = & \text{Account} & - & \left(\begin{array}{c} \text{Current} \\ \text{Account} \end{array} + \begin{array}{c} \text{Capital} \\ \text{Account} \end{array} \right) \\ -183 & = & -410 & - & [\begin{array}{c} (-226) \\ \end{array} + \begin{array}{c} (-1) \\ \end{array}] \end{array}$$

Current Account

- | | | | |
|----|---|------------|-------------|
| 1 | Exports total | | |
| 2 | Goods | | |
| 3 | Services | | |
| 4 | Income receipts (primary income) | PART OF | |
| 5 | Imports total | NET INCOME | → LIKE |
| 6 | Goods | | SERVICES |
| 7 | Services | | PROVIDED BY |
| 8 | Income payments (primary income) | PART OF | AMERICAN |
| 9 | Net unilateral transfers (secondary income) | NET INCOME | FACTORS TO |
| 10 | Balance on current account | | ROW |

Capital Account

- | | |
|----|----------------------------|
| 11 | Balance on capital account |
|----|----------------------------|
-

Financial Account

- 12 Net U.S. acquisition of foreign financial assets
 - 13 ✓ Official reserve assets → CENTRAL BANKS ✓
 - 14 Other assets → PRIVATE SECTOR
 - 15 Net U.S. incurrence of domestic liabilities
 - 16 Official reserve assets
 - 17 Other liabilities
 - 18 Financial derivatives, net
 - 19 **Net financial flows** $(12) - (15) + (18)$
 - 20 **Statistical discrepancy**
-

Bottom line to remember

Whenever goods cross borders, assets move
in the opposite direction.
