# Agenda

- Balance of payments account
- Exchange rate determination with asset approach

# Macro Review: GDP

**Gross Domestic Product (GDP)** measures the total value of:

- **Production:** All final goods and services produced within a country
- **Income:** All income earned from production within a country
- **Value added:** Sum of value added at each stage of production

All three approaches yield the same number.

# Closed Economy

$$Y = C + I + G$$

- All output is either consumed, invested, or purchased by government
- No trade with the rest of the world

# Open Economy with GDP

$$GDP = C + I + G + \underbrace{EX - IM}_{NX}$$

- $EX$  = Exports (domestic goods sold abroad)
- $IM$  = Imports (foreign goods purchased domestically)
- $NX$  = Net exports (trade balance)

# GDP and GNP

- **GDP:** Value of production *within a country's borders*
  - Regardless of who owns the factors of production
- **GNP:** Value of production by *a country's residents*
  - Regardless of where production takes place
- **Relationship:**

$$\text{GNP} = \text{GDP} + \text{Net Income from Abroad}$$

# Open Economy with GNP

$$GNP = C + I + G + CA$$

- $CA$  = Current account
- $CA = NX +$  Net income from abroad

# GDP and GNP

Net Income = wages from Prof. Duarte teaching in France — profits and wages from firm operating inside US

United States GNP = United States GDP + Net Income

# National Saving: Closed Economy

**National saving** = output not used for consumption or government spending

$$\begin{aligned} S &\equiv Y - C - G \\ &= (C + I + G) - C - G \\ &= I \end{aligned}$$

**In a closed economy:**  $S = I$

# National Saving: Open Economy

Starting from  $Y = C + I + G + NX$ :

$$S \equiv Y - C - G$$

$$= I + NX$$

**In an open economy:  $S = I + NX$**

# National Saving: Open Economy

Rearranging:  $S - I = NX$

- If  $S > I$ : Trade surplus, country is a net lender
- If  $S < I$ : Trade deficit, country is a net borrower

# Private Saving

**Private saving** = disposable income that is saved, not consumed

$$S^p \equiv Y - T - C$$

# Public (Government) Saving

**Government saving** = tax revenue minus government spending

$$S^g \equiv T - G$$

- If  $T > G$ : Budget surplus ( $S^g > 0$ )
- If  $T < G$ : Budget deficit ( $S^g < 0$ )

# Total Saving

**Total national saving:**

$$\begin{aligned} S &= S^p + S^g \\ &= (Y - T - C) + (T - G) \\ &= Y - C - G \end{aligned}$$

Using  $S = I + NX$  from before, we get:

$$S^p + S^g = I + NX$$

# Bottom line to remember

Whenever goods cross borders, assets move  
in the opposite direction.
